SUMMARY

Project manager with legal-analysis, process-improvement and AI-assisted development experience across user research, requirements, PRD writing and acceptance.
Led a 6-person TibaMe capstone (graduating Oct 22): owned survey design, led the pivot from user research, iterated the PRD 18 times in two weeks; the team merged 114 PRs in three weeks (12 mine) and delivered early.
Built a full-stack app solo with Claude Code, cutting API latency from 2.4s to 0.2s.
I dig into what I don't understand and speed up what I already know. TOEIC 865 (2022); nearly a year of work experience in Australia.

PROJECTS

SEP–OCT 2026

GoLand
Team Lead / PM
Team capstone (6)
Demo ↗

Coaches open small-group classes; learners join without rounding up a group

- Research: designed the 54-response survey and co-ran 24 interviews; only 7% saw finding classmates as a problem, so I led the pivot to "coaches open classes"
- Specs: owned positioning, business model, the PRD (18 versions in two weeks) and compliance review; the PRD became the AC checklist for dev and QA
- Planning: 5-week WBS schedule, risk responses and weighted progress tracking; set the 9/29 scope freeze and deferred a late rule change after a risk review
- Build & test: built 6 coach-side modules with Claude Code; team merged 114 PRs in three weeks (12 mine); ran a 5-person user test (4 classmates plus me)
- Team ops: moved chat to Discord; built the team wiki; my AI progress-report format became the team standard; helped produce the demo video

Aug 2026

Habitcat
Solo project
Demo ↗

Gamification + an AI companion, so habit-building doesn't fizzle out halfway

- Built a full-stack web app with Claude Code in about a month, from game design and database to deployment (Vercel / Render)
- Traced performance issues from user feedback: API latency cut from up to 2.4s to 0.2s; check-in from 3.2s to ~1.8s
- Designed AI NPC guardrails: the model reads intent, while a rules table with whitelist validation makes the final call
- Shipped 17 releases in a 5-day beta; fixed 72% of 18 player reports within 24 hours

Experience

Apr 2025 – Jun 2026

Simple Kaffa
Barista

- Ran peak-hour front / back-of-house flow; team of 12 hit NT$350K in a day
- Handled cashiering, inventory, ordering and daily / weekly reports
- Cut repeat lookups with a Google Sheets + AppSheet tool for 30 lunch spots

Jun 2024 – Mar 2025

Insight IP Consultancy
Trademark Specialist

- Advised EU / US clients in English on Taiwan trademarks; 10+ concurrent cases
- Handled the firm's first successful invalidation, cancelling a bad-faith mark
- Wrote an SOP manual, trained 4 new hires, and improved templates with IT

Jul 2023 – May 2024

Working Holiday
Melbourne, Australia

- Barista at Abacus in a fully English-speaking, multicultural team
- Certified ISA (International Surfing Association) Level 1 Judge

Core Skills

- Project Management: requirements gathering, scope definition and change control (scope freeze), WBS and milestones, risk management, Agile sprints / backlog
- Requirements & Specs: user interviews, survey design, PRD writing and version control, acceptance criteria (AC), user testing
- AI Collaboration: building with Claude Code; ChatGPT, Gemini, NotebookLM; AI-assisted analysis and documentation, prompt design, Suno for project music
- Tools: Notion, GitHub (PR workflow), Figma (UI design, prototyping), VS Code, Discord, Google Workspace
- Technical Exposure: React, Supabase, Vercel (owned requirements, architecture decisions, acceptance and debugging direction); basic Python
- Languages: Mandarin (native), English (fluent); conversational French, Japanese, Korean, Thai, German, Spanish

Education

Jul 2026 – Oct 2026	TibaMe | Project Management in the AI Era Program
Sep 2012 – Feb 2017	National Taipei University | LL.B., Law (Financial & Economic Law)

Certifications

- TOEIC 865 (Jun 2022)
- Google AI for Generalists — Certificate of Completion (2026; incl. Generative AI Leader, Gemini Notebook, Google Workspace with Gemini)
- Translation Program Certificate — National Taiwan Normal University (EN→ZH translation for Betel Nut Co., a surf media brand)
- In progress: iPAS AI Application Planner (Associate) — exam Nov 2026

About Me

Curious by default	In Australia, I was surrounded by languages I couldn't understand, and I wanted to know what people were saying, so I started learning. Beyond two years of French at NTNU, I can now get by in Japanese, Korean, Thai, German and Spanish. As a trademark specialist, I tracked unfamiliar rules back to their core, which led me to handle the firm's first successful invalidation case.
Too lazy to repeat myself	Once I've learned a process, repetition makes me restless, so I look for a faster way. At the IP firm, I wrote an SOP manual, trained 4 new colleagues and taught myself UiPath to try automating our work. At the café, I built a Google Sheets lookup showing which lunch spots were open. The same urge brought me to TibaMe's AI project management program.
My first PM role	I led GoLand, a 6-person capstone. We assumed finding classmates was the main problem, but my 54-response survey and 24 team-run interviews showed only 7% of learners saw it as one, so I led the pivot to "coaches open classes, learners sign up." I wrote the PRD, set a scope freeze and moved the team to Discord; the team merged 114 PRs in three weeks (12 mine), delivering early. What I enjoy most is getting a group of people moving in one direction.
Thinking like a setter	I lift weights, boulder and play volleyball, and I surfed for ten years, competing and judging; I've also climbed 4 of Taiwan's 100 Peaks so far. On the court I play setter, which feels a lot like PM work: track every teammate's position, decide in a second who gets the ball, and adjust as the play changes.
What I'm looking for	A project management role on a team that values communication and process, where I can bring curiosity to what I don't know, a healthy laziness to what repeats, and hands-on AI collaboration to make the team's workflow more efficient.
